This sequence represents the human K+Hnov14 potassium channel. K+Hnov proteins have a high degree of homology to known potassium channels and may be alpha subunits, which form the functional channel, or accessory subunits that act to modulate the channel activity. K+Hnov14 is a 6 transmembrane domain, voltage gated potassium channel. The gene's chromosomal location is l2d14, determined via PCR chromosomal coalisation using primers AAZ11928 and AAZ11929. K+Hnov cDNAs were isolated by extension of expressed sequence tags (BSTB) which were related but not identical to known human potassium channels. Potential polymorphisms detected as sequence variants between multiple independent clones. Potassium channels have critical roles in various cell types and biochemical pathways. Defective potassium channels are known to cause four human diseases: episodic ataxia with myokymia; cardiac arrhythmia (long QT syndrome); epilepsy; and Bartter's syndrome. As potassium channels are aritical components of virtually all cells, it is likely that abnormal potassium channels are also implicated in certain renal, cardiave will are also implicated in certain renal, cardiave when the cause of cardiave system (CNS) disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     21 ArgPheAspGlyThrHisSerAsnPheValLeuGlyAsnAlaSer---GlyGlyAlaLeu 39
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       encoding K-Hinov proteins may be used for identifying homologous or related proteins and the DNA sequences encoding them. They may be used to produce compositions that modulate the expression and function of the it. They may also be used for the recombinant pathways associated with it. They may also be used for the recombinant production of K-Hinov protein in fermentation cultures. Additionally, such nucleotides may be used in gene therapy protocol; for the treatment of diseases associated with abnormal potassium channels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acids encoding mammalian K+Hnov potassium channel proteins, useful for the diagnosis and treatment of episodic ataxia with myokymia, cardiac arrhythmia, epilepsy and Bartter's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 MetProAlaMetArgGlyLeuLeuAlaProGlnAsnThrPheLeuAspThrIleAlaThr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CGCTTCGACGGCACGCACAGTAACTTCGTGCTGGGCAACGCCCAGGTGGCGGGGGCTCTTC

The invention discloses a composition comprising two or more isolated rat or human polynuclectides or a polynuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynuclectide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for producing a pharmaceutical composition or more of the optimal and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising pain of the compound that method for identifying a compound useful in treating pain sequence presented is a rat protein (shown in Table 2 of therapy). The sequence presented is a rat protein (shown in Table 2 of the sequence data for this patent did not form part of the printed composition construction) which is differentially expressed during pain. Note: of specification which is differentially expressed during pain or presented in a construction or pain constructi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CGCTTCGACGGCACGCACAGTAACTTCGTGCTGGCAACGCCCAGGTGGCGGGGCTCTTC 120
                                                                                                                                                                                                                                                                                                                                                                          New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MetProAlaMetArgGlyLeuLeuAlaProGlnAsnThrPheLeuAspThrIleAlaThr 20

```
is a member of ERG potassium channel family. This sequence is a result of additional sequencing of clone jlhbaa042h05 which was obtained from human brain library. ERG-LP2 gene is mapped to human chromosome 3p21.3-24.3, between markers WI-4218 and RP L15.1 It is predominantly expressed in the brain. The protein functions as a potassium channel modulator and has neuroleptic and nootropic activities. The present sequence is useful for treating several potassium channel mediated disorders (CNS disorders) such as Alzheimer's disease, Parkinson's disease, multiple sclerosis, epilepsy, depression, schizophrenic disorders and amnesia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is a full-length ERG-like protein 2 (ERG-LP2) which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1, Ag

Patent No. 6518398

GENERAL INFORMATION:
TITLE OF INVENTION: NOVEL POTASSIUM CHANNEL MOLECULES AND USES THEREFOR

TITLE OF INVENTION: NOVEL POTASSIUM CHANNEL MOLECULES AND USES THEREFOR

TITLE NET ERERENCE: MIL 055CP

CURRENT FILLING DATE: 1999-07-21

PRIOR APPLICATION NUMBER: USSN 09/119,855

PRIOR FILLING DATE: 1998-07-21

NUMBER OF SEQ ID NOS: 36

SOFTWARE: Patentin Ver. 2.0
                                                                                                        1008

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                65
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence encodes the potassium channel protein of the invention, that is expressed specifically in brain tissue. The protein is used to treat and investigate disorders of the central nervous system such as dementia and cerebral ischaemic sclerosis

Novel eag similar potassium channel polypeptide useful for treating various neurological, cardiovascular, musculoskeletal and proliferative

Claim 8; Fig 1A-E; 52pp; English.

disorders.

```
This DNA encodes a eag similar K+ channel (ESK) polypeptide (hESK1). The hESK1 protein can be expressed by standard recombinant methodology. The ESK polypeptide, polynucleotides and antibodies are useful for treating and diagnosing various potassium channel associated disorders used as neurological disorders, e.g. Alzeanner's disease, depression, anxiety, panic, obsessive-compulsive disorders, attention deficit, epilepsy, parkinson's disease, cardiovascular disorders, musculoskeletal disorders and proliferative disorders such as cancer. The ESK polynucleotide is also useful for synthesis of ESK and gene mapping. The polypeptide can be antibodies, peptides or other molecules such have an effect on the activity of the ESK channel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
